

SCRIPTURE APP BUILDER

LANGUAGE TECHNOLOGY

Create customized mobile apps with
synchronized Scripture text and audio.

DOWNLOADS

Scripture App Builder helps you to build customized Scripture apps for Android smartphones and tablets. You specify the Scripture files to use, the app name, the fonts, the colors, the about box information, the audio and the icons. Scripture App Builder will package everything together and build the customized app for you. You can then install it on your Android device, send it to others by Bluetooth, share it on microSD memory cards and publish it to app stores on the Internet.

Easy to build

Apps can be built directly from Paratext and audio files. Launch Scripture App Builder, follow the steps in the *New App Wizard* and click the *Build App* button. No programming experience is necessary.

[More about Building Apps...](#)

Synchronize text and audio

Audio recordings can be synchronized with the text so that each verse or phrase is highlighted as it is read. This is a powerful feature for those learning to read in their language.

[More about Audio...](#)

Easy to distribute

The apps do not require an internet connection. All content can be packaged together for offline use and distribution, or audio can be made available online for download when needed.

"On the same day that we dedicated the printed copy of the Koma New Testament, we were also able to distribute the Koma NT app! We are now looking forward to recording the audio and including it in the app to make Scripture even more accessible." - Paul Federwitz, Lutheran Bible Translators

SCRIPTURE APP BUILDER

- Designed for non-programmers
- Create Bible & non-Bible apps
- Option for synchronized audio + images
- Offline distribution + app store support
- Software: Windows & Linux
- Apps: Android, ePub (iOS coming soon...)
